EVERY KITTEN IS BORN WITH AN IMMATURE IMMUNE SYSTEM

Bridge the Immunity Gap with NuVet Plus® Feline

Under 6 Weeks

Your kitten is not born with a fully developed immune system. Their developing immune system is susceptible to various stressors, weakening its ability to combat potential health threats.

8 Weeks

Once your kitten is weaned, its immune system is vulnerable. It is challenged by the stress of adoption, separation from litter-mates and exposure to a new environment.

14 Weeks

Nutrition is a large factor in cellular and humoral immunity. It is especially important during the first few months of life while the immune system develops.

Starting NuVet Plus feline now is important to helping your kitten grow into a healthy adult.

22 Weeks +

Antioxidants are critical in the development of a healthy immune system. Taurine, Vitamin C, and Vitamin E are crucial in protecting the kitten against oxidative stress.

NuVet Plus Feline contains essential nutrients for feline development like Whey Protein and Taurine.

Pets Face a Lifetime of Exposure to Free Radicals and Threats to Their Health

In the Backyard/Home: Common backyard pesticides, fertilizers and bacteria can be tracked into your home and weaken your pet's immune system. Common items found in the house, like potted plants and essential oils, can also be harmful to your feline companion.

In the Air: Pollutants in the air may cause skin conditions in pets. Even common household toxins such as cleaners, bug killers and air fresheners affect your pet's health.

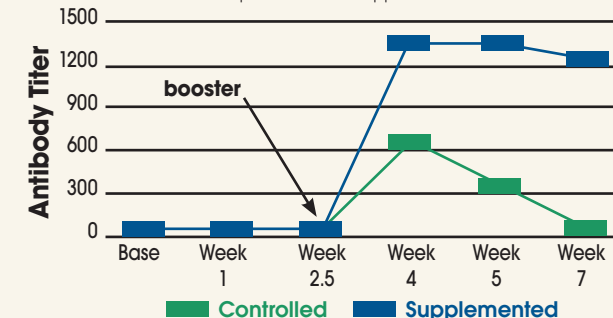

In Food: Many pet foods are made with hormones, preservatives, and traces of pesticides. Corn and grain are common fillers and can cause sensitivity issues for many pets.

NuVet Plus® Immune Support:
For Kittens.
For Adults.
For Seniors.
FOR LIFE!

Routine Vaccine Response

The graph represents a significantly greater immune resistance to the anti-feline herpes virus titer in supplemented vs. control kittens.
